

How to change Wifi Password PLDT Home Fibr 2020

Learn how you can change wifi password on pldt home fibr router 2020. It might be intimidating when trying to change wifi password on pldt home fibr but follow along in this beginners friendly guide. Making sure that no unauthorized users are connected to your PLDT WiFi is crucial as they could be hogging up your bandwidth and speed thus makes your internet experience sluggish.

In this guide, I'll walk you through step-by-step on how you can change the wifi password on your pldt home fibr router.

The steps on this video will be demonstrated using the router AN5506-04-FA PLDT ONU Router but the steps are generally applicable to almost any type/model of router.

Follow along the steps written below or through the video tutorial embedded on this page.

How to change Wifi Password on PLDT Home Fibr Router

To change the wifi password on PLDT Home Fibr router we need first to access the login page of the router.

By default the address is 192.168.1.1 so go ahead and open up

a web browser (preferably modern browsers such as Google Chrome / Firefox / Opera / etc.) and enter this on the address bar: `https://192.168.1.1` or `192.168.1.1` (with or without the `https://` see which works out for you.)

If you are shown with this kind of error “Your connection is not private” simply click the advanced button and click on Proceed to `192.168.1.1` (*unsafe*)

Your connection is not private

Attackers might be trying to steal your information from **192.168.1.3** (for example, passwords, messages, or credit cards). [Learn more](#)

Hide advanced

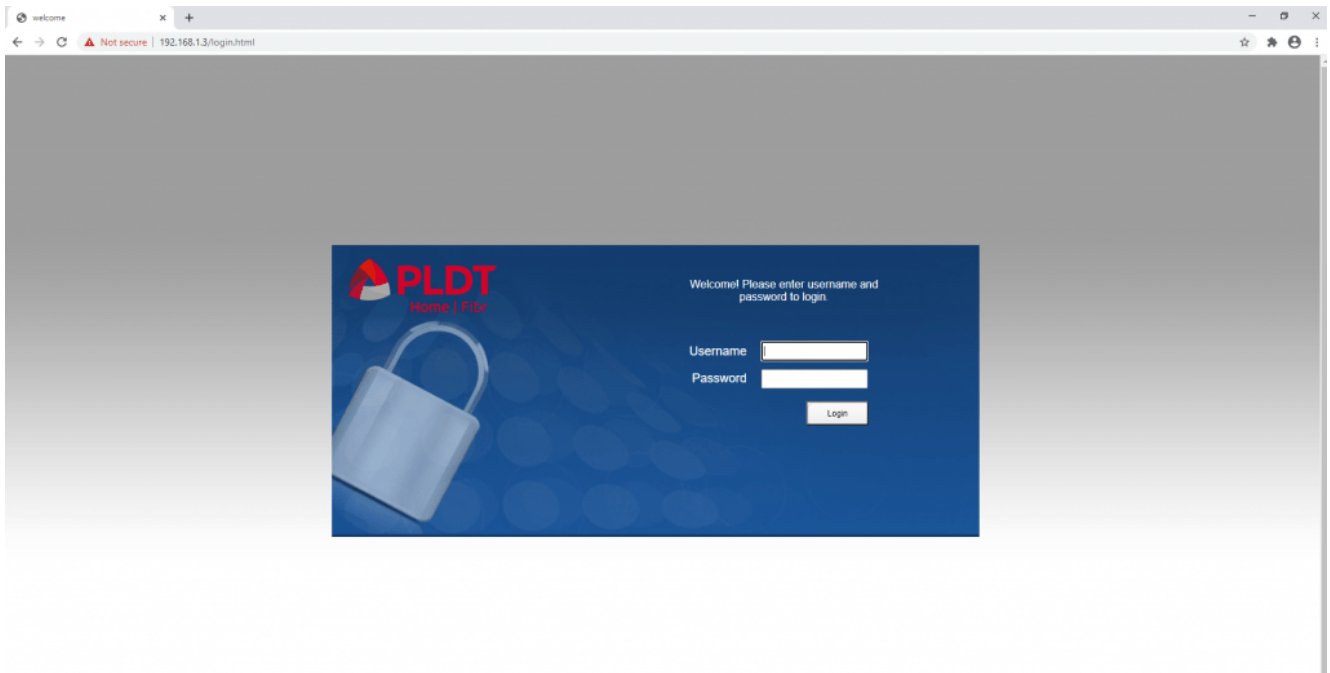

Back to safety

This server could not prove that it is **192.168.1.3**; its security certificate is not trusted by your computer's operating system. This may be caused by a misconfiguration or an attacker intercepting your connection.

[Proceed to 192.168.1.3 \(unsafe\)](#)

Note: I have changed my router ip address from *192.168.1.1* to *192.168.1.3*

Afterwards, you will be taken to this login page. (The user interface / design may vary depending on your PLDT Home Fibr router)

By **default**, the username is **admin** and the password is **1234** or **12345**. This password may change if you've changed this already before.

Upon logging in it might ask you to change your password since the password **1234** is not secure and can be easily guessed by anyone connected on your router.

A screenshot of the PLDT Home Fiber account management page. The page has a yellow header with the text 'You could configure current account on this page.' Below the header are three sections: 'Account Management', '2.4G SSID1', and '5G SSID1'. Each section has input fields for 'SSID Name', 'Password', and 'Password Confirm'. The 'Account Management' section has a 'Username' field with 'admin' entered. The '2.4G SSID1' and '5G SSID1' sections have 'SSID Name', 'Password', and 'Password Confirm' fields. The 'Password' fields have a note: '(You can input 12-64 characters)'. The 'Password Confirm' fields have a red asterisk. At the bottom are 'Apply' and 'Cancel' buttons.

You **MAY** or **MAY NOT** see this kind of screen but if you do simply enter the **old password** "1234" and enter your new own password.

If you see this configuration prompt

New Passwords **MUST** include characters, numbers, and symbols. (Eg. `!*TestPassword01`) will work but (Eg. `TestPassword`) will not be accepted as it doesn't have symbol/s and/or numbers in it.

The same goes with the **2.4G SSID1** and **5GSSID1** Passwords they must also meet the same requirement.

For the SSID Name, it represents the "Wifi Name" on your router so what you input to the SSID Name will be basically your Wifi Name.

Once configuring everything hit the apply button and you'll be able to login.

If you didn't see that configuration prompt

You can simply go ahead and continue along in this tutorial.

You will now be taken to this page and dashboard.

Device Information
Device Information

5G Basic
5G Advanced
5G WPS
Network » Wlan Settings » Advanced

Setup the wireless security and encryption to prevent any unauthorized access and monitoring.

Select SSID

SSID Choice ☒ Enable ☐ Disable *

SSID Name

SSID Name *(1-32 Characters) Hidden ☐

Security Policy

Security Mode

WPA(Wi-Fi Protected Access)

WPA Algorithms ☐ TKIP ☐ AES ☒ TKIPAES

Passphrase *(You can input 12-64 characters)

To change the password, be sure to have the **Security Mode** under the **Security Policy** set to WPA/WPA2/WPAPSKWPA2PSK any of

the security modes.

Then change the WPA Algorithms to **TKIPAES** and enter the wifi password you want to use under the Passphrase.

The screenshot shows the PLDT Home | Fibr router's configuration interface. The top navigation bar includes 'Status', 'Network', 'Security', and 'Management'. The left sidebar lists 'Wlan Settings' options: Basic, Advanced (selected), WPS, 5G Basic, 5G Advanced, and 5G WPS. The main content area is titled 'Network » Wlan Settings » Advanced' and contains a yellow instruction box: 'Setup the wireless security and encryption to prevent any unauthorized access and monitoring.' Below this, the 'Select SSID' section shows 'SSID Choice' set to '1' with 'Enable' selected. The 'SSID Name' section shows 'GV Fibr 2.4G' and a 'Hidden' checkbox. The 'Security Policy' section, highlighted with a red box, shows 'Security Mode' set to 'WPA2PSK/WPA2PSK'. The 'WPA(Wi-Fi Protected Access)' section, also highlighted with a red box, shows 'WPA Algorithms' with 'TKIPAES' selected (radio buttons for TKIP, AES, and TKIPAES are present) and a 'Passphrase' field containing '@#TestPassword1'. An 'Apply' button is located at the bottom of the WPA section.

Once done changing the wifi password, go ahead and don't forget to apply the changes by hitting the Apply button.

Depending on your router, but on this particular router you can have up to 4 (Four) 2.4 Ghz Wifi SSIDs you can navigate through changing the **SSID Choice**.

And to change the PLDT HOME FIBR wifi password for the 5Ghz frequency, just simply go to the **5G Advanced** tab and you will be shown with the similar configuration page.

Once done you can now reconnect to your wifi ssid and see if the passwords have been changed successfully.

Leave your comments, feedbacks down below or through YouTube comment section! I would love to hear your feedback and share your problems through the community and friendly tech-savvy people might give you a hand.
