How to fix windows search bar?

First solution that we can try is to reinstall the necessary app packages for the windows search component installed on Windows.

Commands :

Code # 1:

- Open a PowerShell and make sure to run it as Administrator then enter sequentially the codes.

```
PowerShell -ExecutionPolicy Unrestricted
```

```
Get-AppXPackage -AllUsers |Where-Object {$_.InstallLocation -like "*SystemApps*"} | Foreach {Add-AppxPackage -DisableDevelopmentMode -Register "$($_.InstallLocation)\AppXManifest.xml"}
```

If the code above didn’t work, try entering another code below.

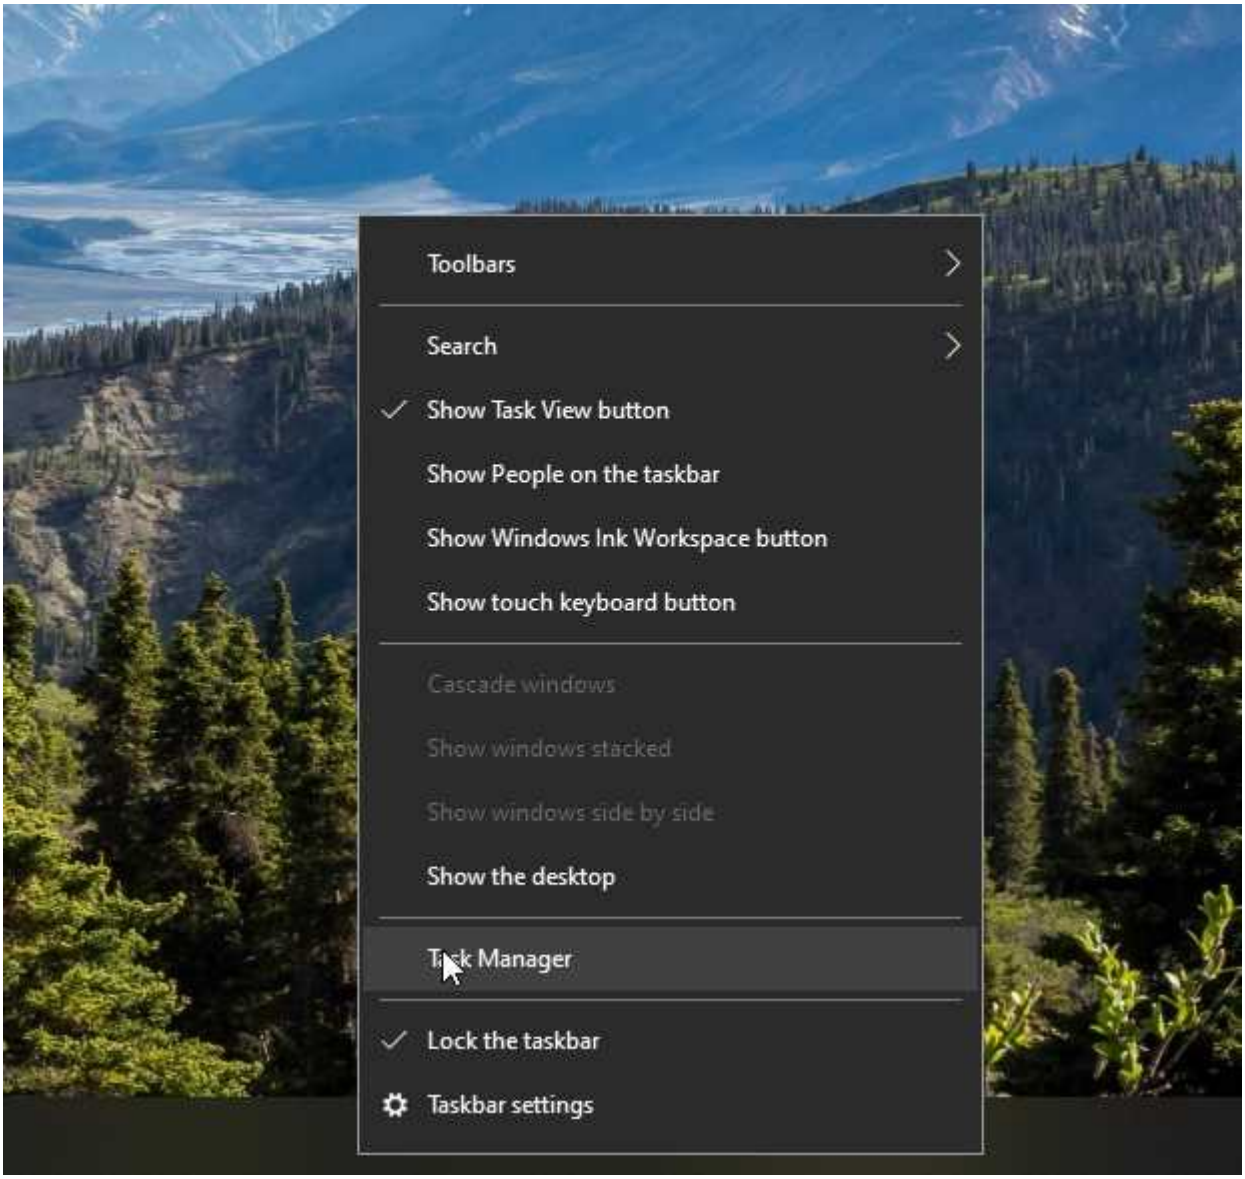

Code # 2:

- Open a PowerShell and make sure to run it as Administrator then enter sequentially the codes.

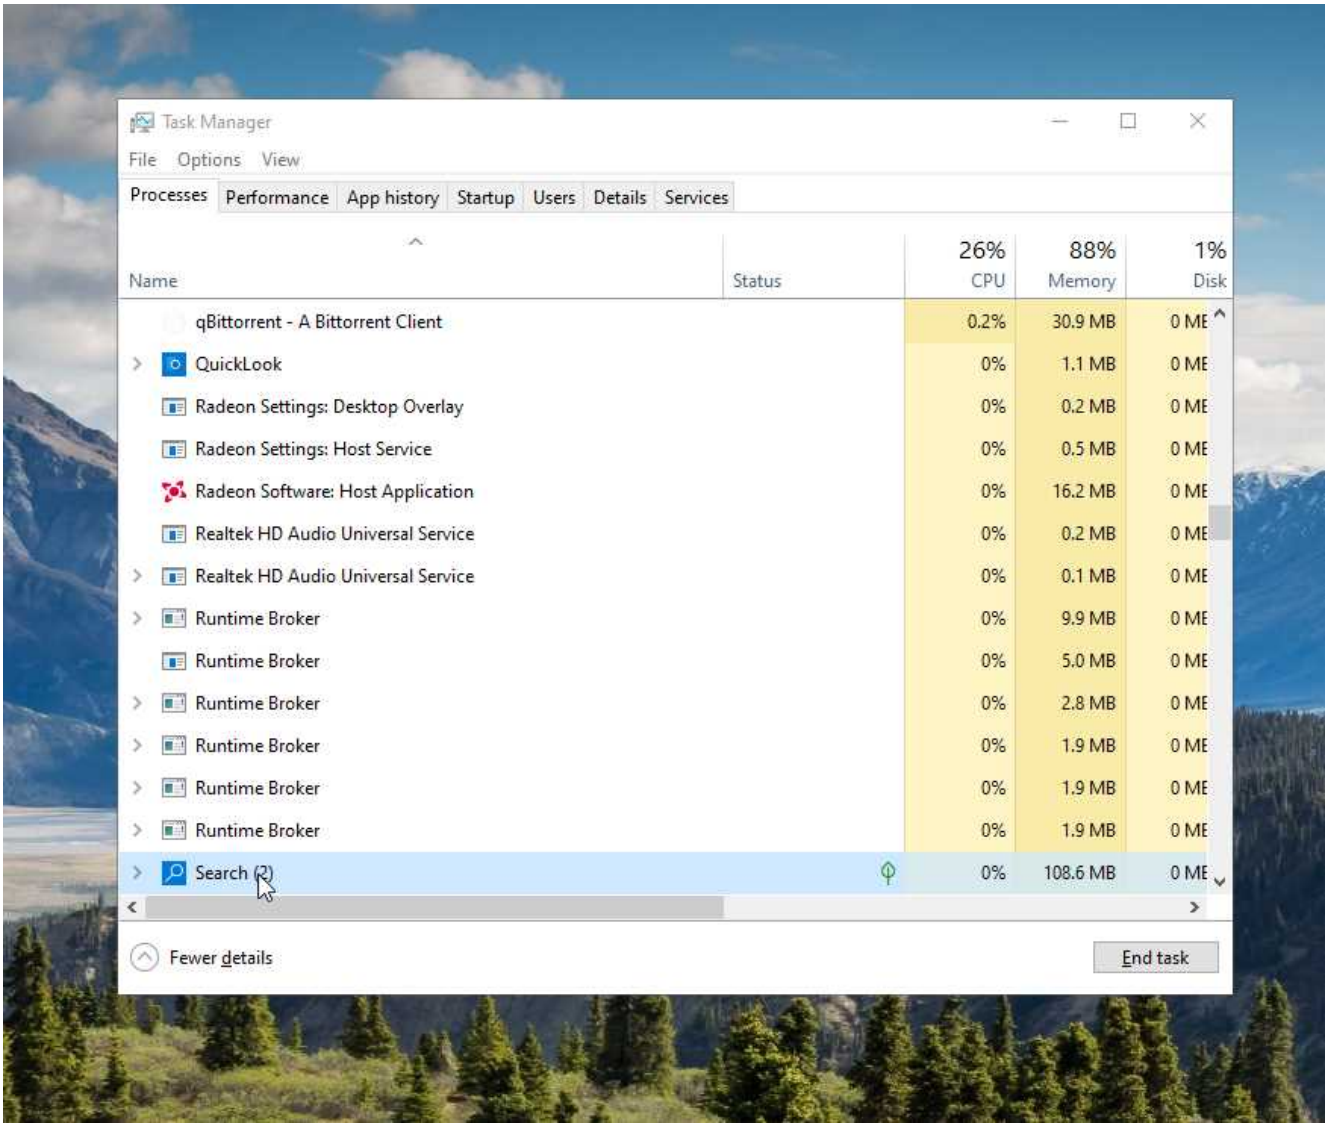

```
$manifest = (Get-AppxPackage Microsoft.WindowsStore).InstallLocation + '\AppxManifest.xml' ; Add-AppxPackage -DisableDevelopmentMode -Register $manifest
```

Others Possible Fixes / Solutions:

Restart Cortana / Search service using task manager.

Open up a Task manager, right click on your task bar, click on Task Manager.

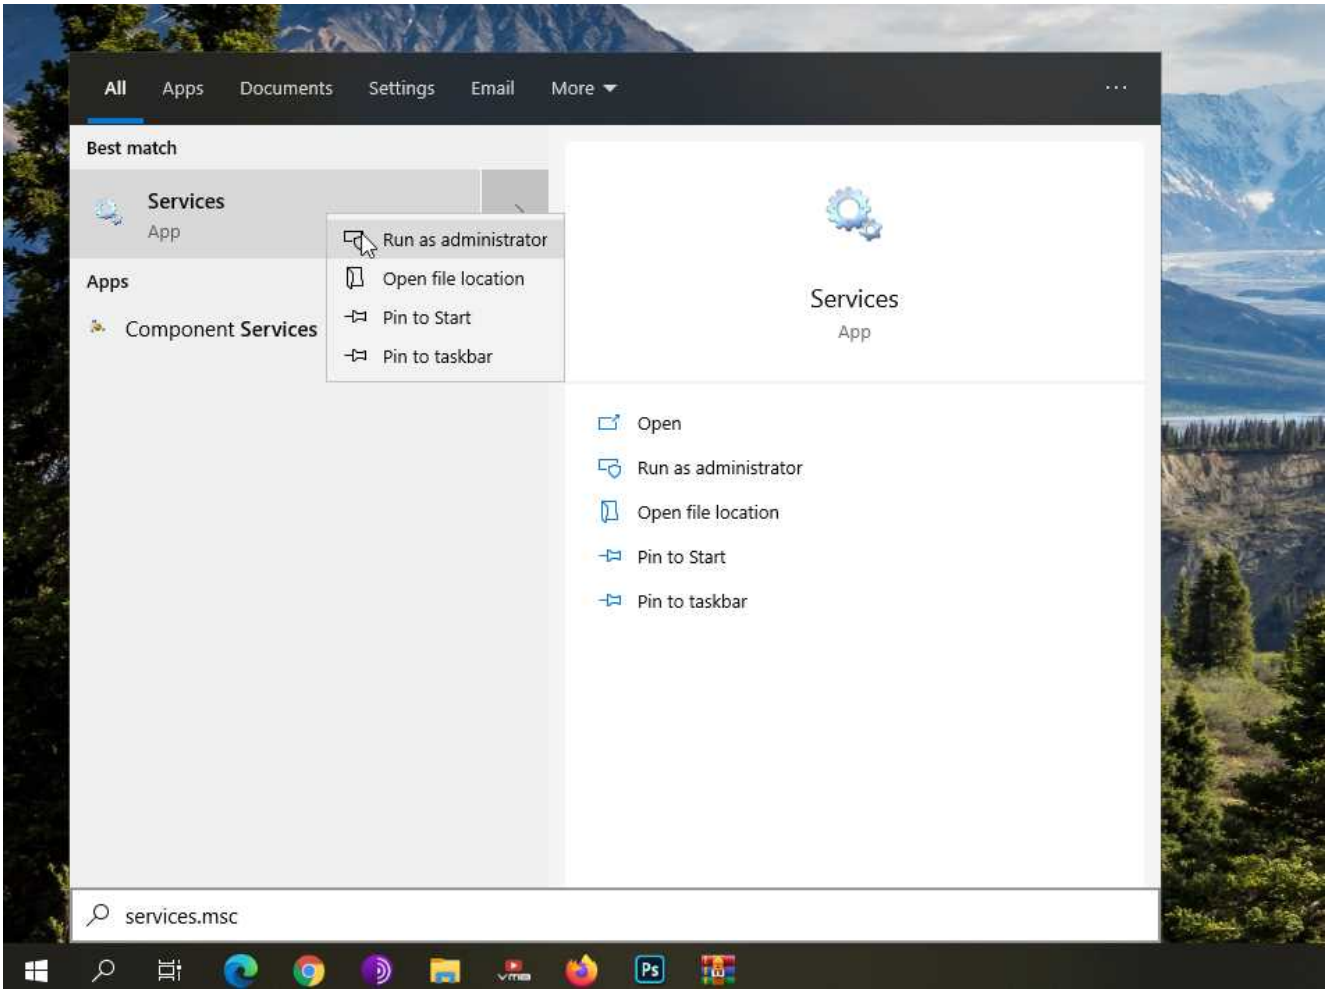

Look for the process “Cortana” or “Search” under the Process tab names.

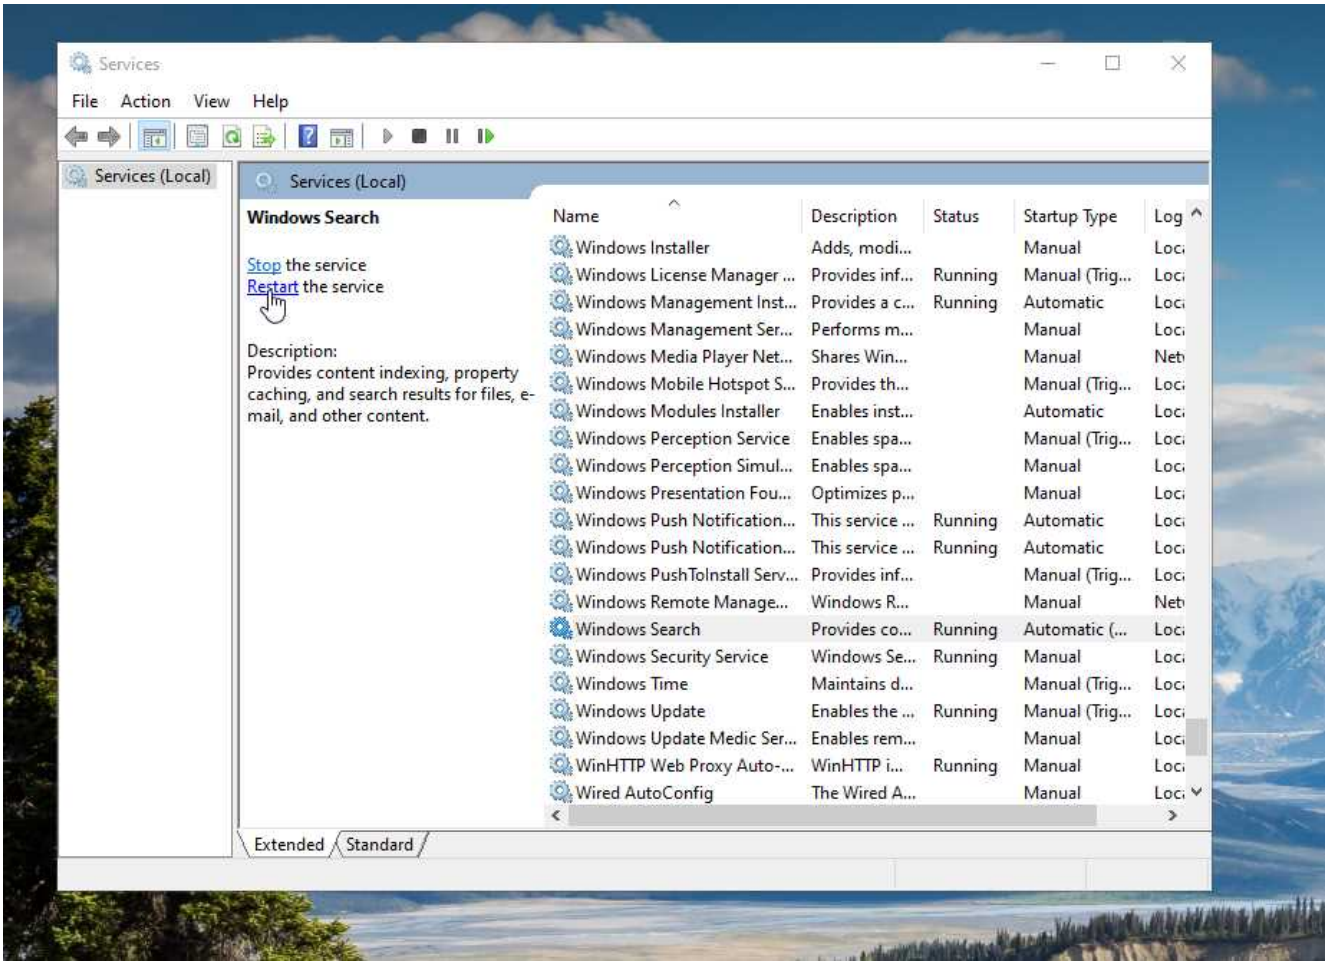

(Tip: Hit keys on your keyboard “c’ or “s” to find processes that start with these letters.)

Click the end task button.

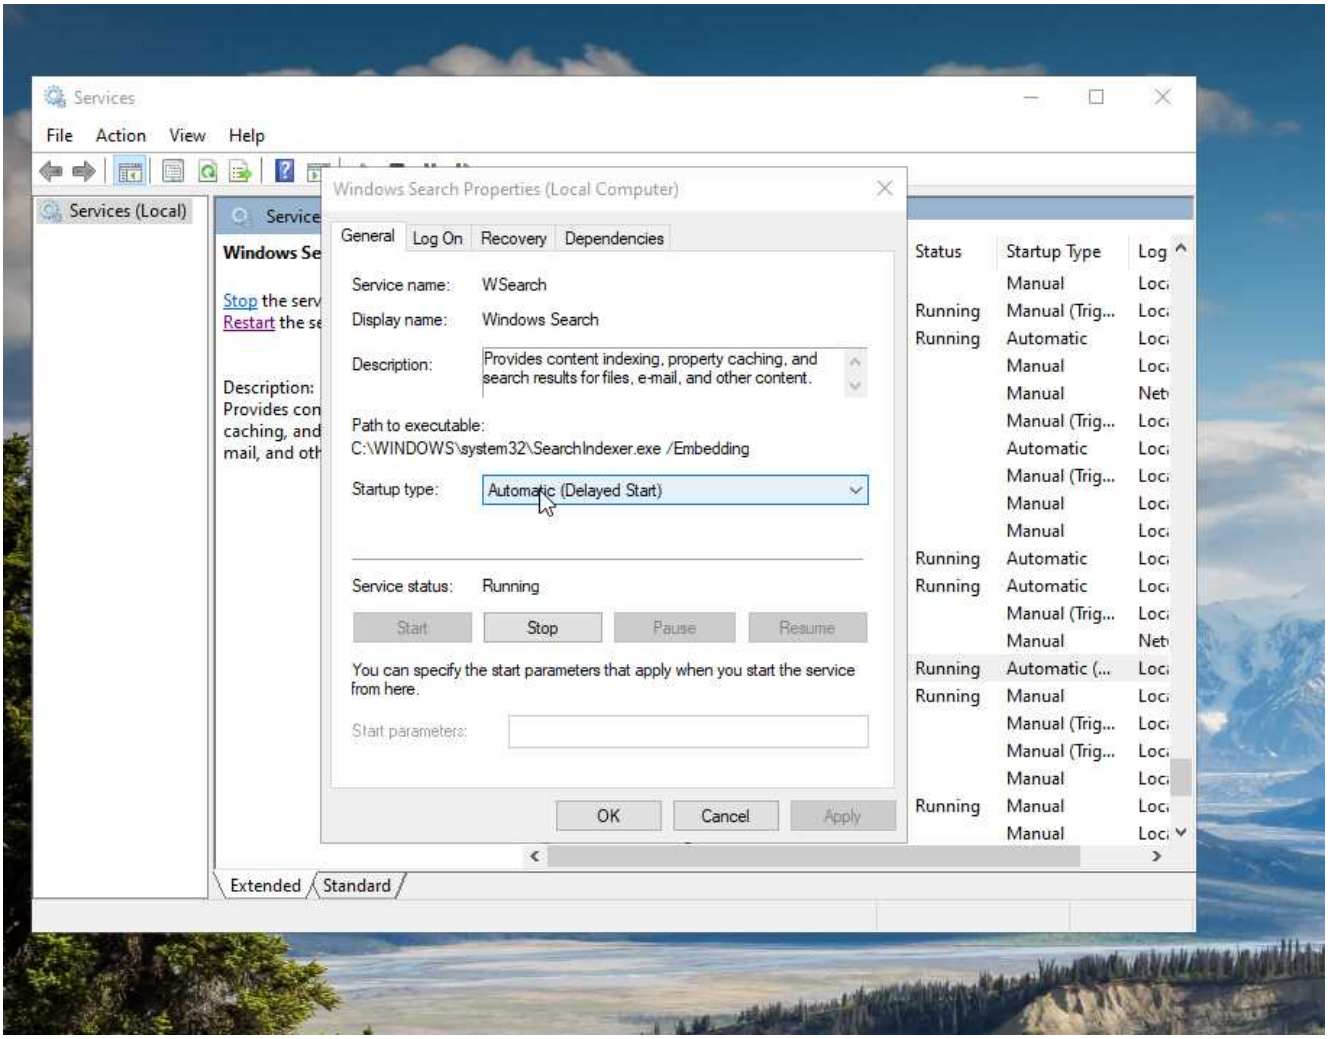

Restart Windows Search Service using services.msc

Go to your start menu, search for services.msc, right click on it and run as administrator.

Look for “Windows Search” service and click on the restart service.

Then, right click the service and click properties. Make sure to set the start up type to “Automatic”. Then hit the apply and ok buttons.

Let me know which solution worked for you!
